

# THE GREEN HEAD

## Materials

- an empty plastic bottle
- cutter or scissors
- googly eyes
- markers
- dirt
- grass seeds
- water

## Process

- After cutting half the plastic bottle, take the bottom as a container
- Make some little holes in the bottom
- Decor the plastic container with googly eyes and draw a face
- Fill it with dirt until we are 1/3 of the total capacity of the container
- Cover the seeds with dirt and water them a bit

After some days we can see green “hair” grows over the bottle head.

For the younger generation it is interesting to see that the grass grows every day. In this way kids learn by themselves the way that a vegetable living being is born and grows. They also learn to respect all lives forms and to protect all biodiversity
