

Dear Educators,

Welcome to this fun educational activity designed for children! The goal of the game is to learn the names of animals in three languages: Italian, English, and the Veneto dialect, through a hands-on activity of cutting and matching.

#### How does the activity work?

- 1. Cutting out images and names: Each child will receive animal images and, separately, the corresponding names in Italian, English, and the Veneto dialect.
- 2. Matching the names: Have the children match the animal names in Italian with the correct images. Once this part is completed, the children can continue by matching the names in English and the Veneto dialect...

#### **Activity objectives**

- Language development: The children will expand their vocabulary by learning the names of animals in three different languages.
- Intercultural learning: Through English and the Veneto dialect, the children will have the opportunity to engage with English language skills or get closer to local culture.
- Manual skills and focus: Cutting out and matching images will stimulate motor coordination and attention.

The activity can be done in small groups, encouraging collaboration among the children, or individually to focus on their own skills.

### **Required materials**

- Scissors
- Sheets with animal images and the corresponding names in Italian, English, and the Veneto dialect

Enjoy this activity and explore the world of animals with the children in a creative and interactive way!

### The animals and their names

## Cut along the dotted lines and match the animal pictures with the correct names!

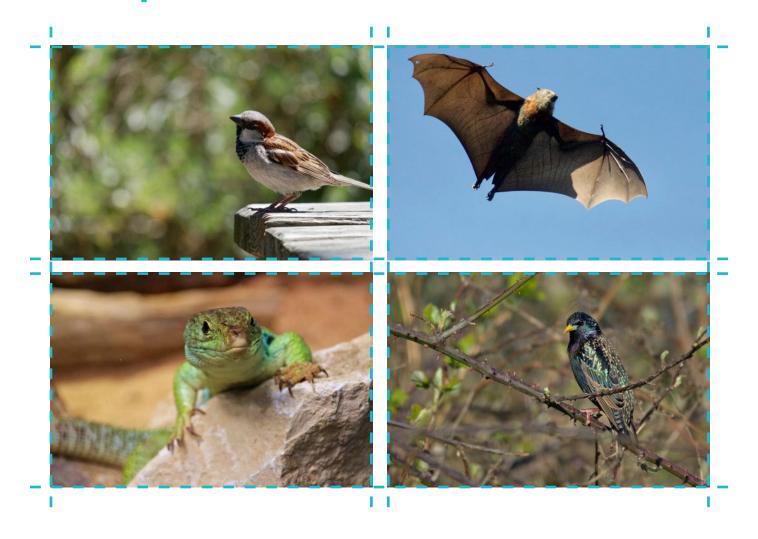

### The animals and their names

# Cut along the dotted lines and match the animal pictures with the correct names!

### The animals and their names

### Cut along the dotted lines and match the animal pictures with the correct names!
